Version with 32 flat jets

Product Card

Dear customers,

Thank you for trusting us and buying our product!

The ROCA POOL-SPA company, one of the leaders in the European hydromassage bath market, has been offering its world class quality products for many years. The endurance, reliability and safety of our baths has always been of greatest importance to us; that is why we always use materials and devices from reputable suppliers.

The manual will help you learn about the bath installation and its use. In this way, you will be able to use the bath without any problems for many years to come. Have a great time and enjoy our baths!

Have a great time and enjoy our SPAS!

1. SAFETY RULES

SPA bath will be supplied to the customer in an original packaging. Remove the packaging and carefully check the SPA bath before use. Notify your dealer about noticed discrepancies, if any.

**It is prohibited to lift the bath by the piping.
Always put the bath on the feet. Do not let it rest on the side wall.
Make sure that the bath is properly secured if the installation work is carried out in the close vicinity.**

Connection of the electrical system to the network and connection of the fittings to the water line should be carried out by authorized professionals.

2. PREPARATION OF THE INSTALLATION SITE

- The SPA bath can be used both in closed or open rooms.
- It should be placed on a **hard, levelled floor** to prevent the device from sinking and ensure proper operation.
- If the SPA bath is to be located in a closed room, make sure that enough space is provided to move the bath into the room.
- The dimensions of the bed plate the SPA bath is to be installed on should allow the installer to properly arrange the feet, conduits and cables (including sufficient access).
- Bear in mind the SPA bath emptying method.
- Pay attention to the material of the walls and the ceiling as they should be resistant to water steam produced during the SPA bath operation.
- In view of possible water splashing during the use of the SPA bath, the floor has to be made of a highly water resistant material such as tiles or plastic coats. Where a floor covering is used, it has to be adequately protected from bacteria which may develop in a moist environment. Use special rugs or coverings used in yachting. Parquet floors or any other wooden floors are not recommended unless they have been appropriately processed as in the case of wood used in gardening or outdoor structures.

3. INSTALLATION OF THE BATH AND THE ADDITIONAL ACCESSORIES

- To ensure proper operation of the SPA bath, install it on a firm and carefully levelled floor (providing for the drain slope), e.g. on a 10 cm thick cement slab to prevent the bath from sinking.
- Once the bath height is defined, prepare a cement block to rest the feet.
- The dimensions of the hollow and the cement block must be sufficient for the installer to properly arrange the feet, piping and the cables.
- Fasten the feet to the cement block so that they cannot move by accident.
- All the connections between the optional equipment and the bath have to be made by gluing the pipes and the fittings. Metal pipes must not be used.
- Fill the bath with water to make sure the connections are tight.
- Do not fill the hollow around the bath with any materials as the access to all the pipes and connection points has to be maintained.
- It is recommended to install a floor drain in the bath installation area below the bath level.

4. LIGHTING

The light switch must be provided by the customer.

The light colour changes in a sequence.

Colourful spotlight settings:

- **Slow colour:** Colours transition gracefully from colour to colour, cycling through the entire colour wheel. Each colour cycle lasts approximately 3 minutes.
- **Fast colour:** Colours transition from colour to colour, cycling through the entire colour wheel. Each colour cycle lasts approximately 1 minute.
- **Slow random colour:** Colours step or jump from one colour to the next in random order. Each colour duration lasts approximately 10-15 seconds.
- **Fast random colour:** Colours step or jump from one colour to the next in random order. Each colour duration lasts approximately 5 seconds.
- **High speed random colour:** A rapid series of intense flashes of varying coloured light.
- **Cross fade:** Colour cycle back and forth gracefully between blue and green. Total cycle lasts 1 minute.
- **Fixed colour:** Static display of a single colour. Available colours include green and blue.

Colourful multi-point light settings:

6 brilliant colours and 4 colour transition programs

- **Tidal fade.** Cool colour mix, slow transitions between green and blue tones.
- **Afterburner Fade.** Warm colour mix – slow transitions between red and orange tones.
- **Spectrum Slowdance.** Slow transitions between all six colours.
- **Colour Burst.** Fast strobe through all six colours.

5. TYPES OF JETS

Mini directional jet - PD1000339	
Rotary jet - PD1000344	
Rotary jet - PD1000345
